decentrabuilds

This lite paper is the first version that summarizes the purpose and process of decentrabuilds and it is subject to improvement as we develop the products of Decentrabuilds.

INTRODUCTION

Welcome to the future of web3 funding. The world comprises over 8 billion people. Currently, over 5 billion people are using the internet. The adoption of blockchain technology has been exponential in the last 4 years and a lot more will happen in the future. There are over 83 million active crypto wallets. The aim of blockchain is decentralization, with different consensus algorithms. But the primary purpose is for people to come together and trust each other through a safe protocol.

Together we can do more than we do individually.

The development and growth of blockchain technology are slow in some regions that have the potential for great adoption because of limited access to funds for dapps.

For example, the Hive blockchain protocol is currently saving a lot of lives in Africa, Venezuela, Ukraine and other regions of the world because of the possibility of earning through content creation.

Blockchain technology, in its current form, is gradually breaking through the stranglehold on the web, and decentrabuilds aim to strengthen micro and major funding for Dapps.

OVERVIEW

Decentrabuilds is a DAO protocol that provides financial
solutions to build new technologies that solve real-life
problems and create a secured investment for everyone on the
blockchain. Decentrabuilds ecosystem comprises a voting dapp, a
lottery system and a Dex platform.

DECENTRALIZED VCs

PROJECT PARTNER STRUCTURE

Decentrabuilds build through the dynamism of the blockchain
algorithm and decentrabuilds internal curved design pattern to
support other projects that we refer to as project partners.

The project partnership is open to any project from any region
of the world, and the application is free. However, the internal
team will check for the most secure projects that have the
potential to be successful. Selected projects will be deployed
on the chain for the community to consider the best among them.
The minimum project that will be deployed is three per time and
there is a 14 days voting window on the best amongst them. The
project that comes out first gets the funding, and others will
wait for another round. One project will be funded every month
based on the capacity of the reward pool and the project
liquidity state.

PROJECT PARTNER REWARD

Project partner reward is the reward that is given back to the people that voted on projects to receive funding from decentrabuilds. The project owners or team decide the number of tokens they wish to release for decentrabuilds and this will be in the contract before the vote, making it transparent for the community.

VOTING PROCESS

The voting process is simple. Buy $DBUILDS tokens, lock tokens and navigate to the project partners page to vote for your favourite projects. You can vote for more than one project and voting attracts blockchain fees.

VOTE METRIC

The number of tokens locked at the time of the vote will be stored along with the project vote result. And this is calculated for the reward from the project partners. Thus, the reward distribution from the project partner is calculated by the number of tokens locked in wallets at the time of the vote, multiplied by the token from the project reward divided by the number of voters.

User 1 reward =
token locked x total token from project partner
/ number of people that voted for the project
partner

LOCKING REWARD

There is a locking reward for token holders and they are based on the duration. 30days(12%APR), 90days(28%APR), 180days(58%APY) and 360days(88%APR).

PARTNER REWARD VESTS

Only the people that participate in votes will earn through the partner reward. There is a vesting period of 4 months for partners' reward to be distributed to every wallet that participated in votes. Thus, if the prize is $1,000, the reward vest is $250 every month.

LOTTERY STRUCTURE

The lottery is a system that rewards multiple participants that have the winning number. Participation in the lottery starts through the tickets. Each ticket cost 10$ and it is accessible to everyone in the community. Each user can buy up to 10 tickets for a round.

There is a lottery number between 1 to 50 to be selected by the users to enter the lottery. The lottery contract picks a number between 1 to 50 as the winning number per session and everyone that has the number in their ticket will share the reward. If there is only one winner, the winner takes the entire pool. Also, in a session where this is no winner, users' tickets will be valid to wait for another round.

LOTTERY REWARD

The reward is based on the number of people that have the winning ticket. However, 90% of the pool prize will be shared among the winners and 10% will be burnt.

DEX STRUCTURE

Coming soon.

Token swaps on decentrabuilds are a simple way to trade one token for another via automated liquidity pools on BNB Smart Chain, and a few other chains, with market makers. The development will come later and this document will be improved in the functionality and process. However, the aim is to have a less transaction cost for token swaps.

DAPPS-DEX
IN BLOCK

Decentrabuilds Token ($DBUILDS)

The decentrabuilds token serves three
Clear-cut purposes: Governance,
Utility, and Builders.

Governance

Decentrabuilds token provides holders with voting rights for the
selection of project partners and the ability to earn based on
tokens locked during the votes.

Utility

Decentrabuilds token is a native token, and it serves multiple
purposes, it is used for the lottery, locking, and dex base
currency.

Builders token

The decentrabuilds token served as the builders' token. It is
the token for the project partners and the key valid for the
investors to earn in the partners' project.

VISION

Decentrabuilds is supporting projects of great potential in Web3. Our vision is to be a source and base for the development of web3, and we look ahead to a future transformed for the better through blockchain technology.

Our vision is that one billion people will be in Blockchain technology by 2028, transforming and creating wealth distribution for everyone. A lot of promising projects fail, not because the team or product failed, but because securing funds was simply too challenging.

Decentrabuilds will take on this challenge for our partner projects, and support them in a way that will give them an excellent position for success in the web3 space.

We are forming partnerships at the right phase of the project to partner with great VCs and strategic companies that will help build more projects as we drive the project forward.

BUILD-DAPPS IN VOTES

BUILD'All

Build'all is a term formed in decentrabuilds to communicate the decentralized VC relationship that decentrabuilds build between investors and project partners.

Once a project makes it through our selection process, the first step is to set guaranteed allocations of tokens on schedules for distribution. Thus, project partners will provide the breakdown of how the funds will be used comprehensively and the investment will be given stage by stage until all aims are achieved.

BULL & BEAR

Cryptos are volatile and there is always time for bull and bear. Positivities in the crypto market are driven by bulls. Diversification is the key to success in investment, especially across such new and volatile assets. We have a system that allows us to discover significant projects and invest in them to serve as a backbone to investment and holders of the $DBUILDS token.
We encourage swift profit and long-term project investment. The first factor we consider is how safe the project is, and the security of funds, and we encourage full participation in blockchain technology adoption.

TOKENOMICS

We are bullish on the decentralized economy and we plan on being one of the major entities that help bring potential projects to reality, as we back great projects in all areas of web3.

The key to stable and sustainable tokens is a good token economy. And instead of creating tokens on every chain, we build only on BSC but extend the development of dapps to other great blockchains.

ROADMAP

Q3, 2023

☑ Website Launch
☑ Litepaper V1
☑ Project Research
☐ Private sale
☐ Strategic Partnership
☐ Dao Voting Application

Q4, 2023

☐ Launch Pad
☐ Dex listing/Liquidity lock
☐ Listing on coinmarketcap and coin gecko
☐ Lottery app
☐ Ambassador program
☐ Strategic Partnership
☐ Litepaper V2

Q1, 2024

☐ Decentrabuilds Dex launch
☐ Listing on CEX
☐ Strategic Partnership
☐ Litepaper V3

Q2, 2024

☐ Decentrabuilds Global Conference
☐ Strategic Partnership
